

Discover the places where you can save water. That's the KEY to conservation!

Label each of these tips on where you can conserve water. Write "H" for Home, "O" for Outside and "S" for School.

_____ **Washing Clothes**

Conserve water by only washing full loads of laundry.

_____ **Washing Dishes**

Conserve water by only running the dishwasher when it's full or by running the faucet as little as possible when washing dishes by hand.

_____ **Flushing the Toilet**

Try "letting it mellow" and not flushing after urinating. It's an easy way to conserve because the toilet can be the biggest water user in the house.

_____ **Taking Showers**

Shower for only as long as necessary. An easy way to do this is to play music and keep the shower to the length of two songs.

_____ **Food and Cooking**

When food is thrown out, you're basically wasting the water it took to make it.

_____ **Watering the Lawn**

Water during the cooler parts of the day when water evaporates less quickly. Don't water on windy or rainy days. Consider Xeriscaping; it's a type of dry landscaping that doesn't need much water to look nice.

_____ **Washing the Car**

Use a spray nozzle that turns off easily and a bucket full of soapy water. Pull the car onto the lawn so that the excess water will go onto the grass instead of running down the gutter.

_____ **Running the Faucet**

Turn off the faucet while brushing your teeth. Don't let good water go down the drain.
